Instructions for WA Safes
with an electronic CAWI EVO keypad lock

MANY THANKS!

You have chosen a product tested according to EN1143-1.
A Swiss quality product with VdS-tested security.
Please read these instructions carefully before operating your safe!
Opening the lock

- First turn the opening handle anti-clockwise in the closed position (horizontal). This will release the bolt.
- When the correct opening code is entered (0 0 1 2 3 4 5 6 at first use), the green LED will light up once and you will hear a high-low beep.
- If the opening handle is not turned clockwise into the open position within 20 seconds, the lock will be secured again.
- Turn the opening handle clockwise into the open position and open the door. If the door or the bolt remains open for longer than 20 seconds, the lock will be held in a preload position.
- Each press of a button will be acknowledged with a beep, and any pause longer than 5 seconds will erase any input. If an incorrect code is entered, this can be deleted by pressing the C button.
- If the entry is incorrect, the green and then the red LED will light up and you will hear four beeps. After 4 incorrect entries, you will be locked out for approx. 12 seconds. After another 2 incorrect entries, you will be locked out for an extra 12 seconds. After this time, the correct code must be entered and the lock will then open.

Closing the lock

- Close the safe door. Turn the opening handle anti-clockwise into the closed position (horizontal). The lock closes automatically and is therefore secured.
Programming

Important: Only program when the door is open!

(Always move between steps within 5 seconds)

- Open the door and immediately press ∗ 0 1 ∗
- Enter 0 0 ∗
- Enter previous code, e.g. 1 2 3 4 5 6 ∗ (factory code)
- Enter new code e.g. 1 1 1 2 2 2 ∗
- Re-enter new code, 1 1 1 2 2 2 ∗

YOUR NEW CODE IS NOW 0 0 111222!

For security reasons, the factory code should be changed immediately after delivery. Please do not use your date of birth or similar, widely-known information.

Please close the bolt work when the door is open and open the lock with the newly programmed code two or three times.

Power supply

The lock is powered by a 9V (ALKALINE) block battery. If there is no longer enough battery power, a high-pitched warning will sound 10 times when the opening code is entered, and the red and green LEDs will blink alternately 10 times. The battery should be changed in the next few days. Open the battery cover as illustrated and change the battery.

After changing the battery, enter the valid opening code 00 X X X X X. You will then hear 3 beeps. Enter the opening code 00 X X X X X again and the lock will open.
Basic rules when selecting a password

Avoid using obvious passwords
- Do not use trivial values such as 000000, 0815, 123456.
- Do not use your own birthday, vehicle registration number, telephone number or name (i.e. your own name, the name of your spouse, names of children or pets, name of your company or place of residence etc.) as a password. Do not use any standard passwords such as "Password" or "Safe".
- Writing a number/word backwards is also too simple.
- Do not use a password that you have already used.
- Important passwords should not have any logical structure.

How do you come up with a secure password?
- The golden rule here is that a password is only secure if it is also kept secret.
- Always remember your passwords - never write them down.
- Consider as many keys as possible (traces of wear and tear on the keypad reveal the individual figures over the course of time)
- The solution: come up with a fantasy password. For example:
  - I only like ice cream in the summer - First letter of every word: lolicits - in numbers: 47542488
  - to be or not to be - First letter of every word: tbonmb - in numbers: 817681
  - My mother is 42 years old - First letter of every word: Mmi42yo - in numbers: 6644207

Last but not least
Think about how the password can be obtained if it can no longer be revealed by the owner (e.g. in the event of their death). Deposit a sealed envelope with your notary.
General:
For every safe weighing under 1000kg, professional anchoring is a minimum requirement according to standard EN1143-1 and must be
carried out by the assembler or the customer. Every safe is therefore pre-equipped with 8 holes (4 at the back and 4 on the bottom) with
a circumference of 16mm. The property insurer should be informed if anchoring is not possible according to the established standards.

Opening:
All WA models are equipped with a VdS-tested electronic security lock. After entering the correct combination of numbers, the bolt can
be opened by turning the handle in a clockwise direction.

Closing:
Push the door close and tighten the bolt by turning the handle in an anticlockwise direction. The electronic lock will now close
automatically. Check the door handle to see if the lock has closed properly. The handle should no longer be able to turn.
Warning! If the programmed code is lost or forgotten, it will no longer be possible to open the safe without damaging it. WALDIS does
not possess any emergency or other codes that can be used to override the code set by the customer. WALDIS accepts no responsibility
for consequential losses.

Care and maintenance instructions:
We recommend that you carry out lubrication and maintenance checks at least every 12 months and ensure that the hinges, for
example, are oiled with penetrating oil. Over time, the door may sink due to its weight. The hinges can be readjusted with an Allen key.
When the door is open, lower the locking bolts and lightly oil them. In addition, the safe is maintenance-free and can be cleaned inside
and out using a damp cloth. When cleaning the inside, allow to air-dry well.
In the event of a problem, the manufacturing firm WALDIS Tresore AG is at your service.
Warning! Do not clean with household detergents.

Anchoring the safe:
4 threaded bolts M12 x 150mm (Grade 8.8, DIN 975), 4 nuts M12 (ISO 4032) and 4 discs (ISO 7089). Adjust the safe in the chosen
location and drill holes of a diameter of 14mm through the mounting sleeves. Clean drill holes well. Insert a two-component adhesive
(Hilti HIT-HY 170 500/2-EU) in accordance with the manufacturer’s instructions. Insert threaded bolts with the pre-mounted nuts and
discs according to manufacturer’s assembly guidelines. Once glue has dried (according to information provided by the manufacturer)
tighten the nuts (max torque 50 Nm).
Before anchoring to the back wall, remove the outer panels of the mounting holes with a piercing tool.
If the mounting materials supplied are not used due to the nature of the floor or wall, the mounting must be adjusted accordingly.
(Minimum requirement of threaded bolts M12, screws or dowels (GRADE 8.8, DIN 975 and discs ISO 7089). Always follow the
manufacturer’s guidelines.
Warning! If use of the prescribed mounting materials is not possible or if anchoring cannot be carried out, consult the property insurer.

Installation/Anchoring/Handover:
Installation and anchoring should only be carried out by trained personnel from WALDIS Tresore AG or by authorised WALDIS retailers.
WALDIS accepts no liability for improper installation or anchoring. There is a risk that the safe will no longer meet the requirements of
standard EN1143-1 and will therefore be uncertified.

Limitation of liability:
The manufacturing firm WALDIS Tresore AG accepts no liability for damage resulting from forced use or improper handling, or for
property damages which result from incorrect closing of the safe. The safe’s warranty and certification will expire following break-in
attempts, fires and unauthorised interference in the construction of the safe.
Chromium steel interior cladding:
The entire inner cladding of the safe (base/ceiling/sides/back) forms an integral part of the security concept and should not be left out. The ceiling plate must be secured with a rivet. This ensures that the unauthorised removal of the inner cladding cannot take place without leaving clearly visible signs.

Inner cladding installation instructions:
1. Lay the base panel
2. Insert the left side panel into the base panel
3. Insert the right side panel into the base panel
4. Place the back panel behind the base panel
5. Slide in the ceiling panel
6. Securing with rivet

Dismantling
Even very careful handling when removing the safe cannot completely rule out the risk of damage or visible marks to the structure. WALDIS accepts no liability for loss or damage resulting from dismantling the safe.

General safety information:
When using the cabinet, there is a high risk of pinching from the door and the hinges. The door should only be opened and closed using the turning handle. WALDIS Tresore AG rejects any liability for any injury that may arise from misuse of the door. Before using the safe, it is important that you have fully read and understood these instructions.
General Terms and Conditions of Business

The Customer acknowledges the terms of delivery stated below upon conclusion of the contract. All verbal agreements and agreements made by telephone must be confirmed in writing in order for them to be binding.

Conclusion of the contract
The contract shall enter into force following our written confirmation of your order.

Prices
Our prices are net "ex works" from our Rümlang factory. Transportation, packaging, insurance, assembly, installation and any subsequent application support shall be charged separately. In the event of significant changes to production costs resulting from currency fluctuations, increases in import costs, increases in material prices or wages, we shall reserve the right to make proportionate price changes between the conclusion of the contract and the delivery date.

Payment terms
Our invoices are due for payment 30 days from the invoice date (date of expiry). They must be paid in Swiss francs without any discount deducted. Once the payment term has expired, the Customer shall immediately be in default without any reminder being sent, and we shall be entitled to charge late payment interest of 5% p.a. in such cases. Counter-claims or objections regarding the purchased item shall not justify any withholding of payment.

Time of the deliveries
We shall endeavour to deliver the goods at the time specified in the order confirmation, but shall not accept any liability for delivery delays.

Warranty
WALDIS shall provide a warranty for a duration of 24 months from the date of transfer of the benefits and risks that the purchased item is free from manufacturing defects and defective workmanship. The customer undertakes to inspect the purchased item immediately upon delivery and notify any objections within 8 days of their discovery. In the event the goods are defective, WALDIS shall be entitled to either replace the defective parts free of charge, repair the purchased item or offer a reduction in the purchase price to a level deemed acceptable for the customer.

Warranty against burglary
WALDIS shall provide a warranty for resistance grade 2 or higher safes for the theft resistance of the secure storage unit according to the Euro standard EN 1143-1, and shall do so for the duration specified in the order confirmation. WALDIS may restrict this warranty in locations that are particularly at risk or make it dependent on additional measures, such as the existence of an alarm system. In these particular cases, the alarm system must have been fully functional and in focus at the time of the burglary and must have actually triggered and conveyed this to the alarm. If not, then the burglary warranty shall expire with immediate effect.

The warranty against burglary means that WALDIS undertakes to replace the secure storage unit in question free of charge following the successful burglary of the secure storage unit mounted in place at the premises by WALDIS, but shall not oblige it to cover any consequential damages or extra costs resulting from the burglary, such as the transportation and assembly of the new secure storage unit, or the dismantling or disposal of the old secure storage unit. The customer shall in particular not be entitled to any compensation for or replacement of the contents of the secure storage item. The warranty against burglary only relates to burglaries on the premises in which the secure storage unit was located and mounted in a minimum four-point manner by WALDIS or an authorised partner company, in accordance with the most recent operating instructions. If the secure storage unit was not located, mounted or moved by WALDIS or an authorised partner company, then the burglary warranty shall expire with immediate effect.

Disclaimer
The aforementioned warranty as well as the burglary warranty include a final arrangement as regards the delivery of the purchased item. Any additional liability shall be excluded in full. In terms of any additional duties of WALDIS to be agreed separately, such as transportation, packaging, insurance, assembly and installation services, WALDIS' liability shall be limited to intentional damages or damages resulting from gross negligence (Art. 100 para. 1 OR). The customer also acknowledges the right of WALDIS to call in the services of third party companies in connection with the aforementioned obligations, whereby the liability of WALDIS in such cases shall be limited to ensuring the careful selection of and issuing of instructions to the third party companies called in (Art. 399 para. 2 CO).

Documents and drawings
Documents and drawings are protected by copyright and shall not be made available to a third party or exploited by the customer for its own benefit without our written consent to do so. Offenders shall be liable to pay full compensation here.

Retention of title
The goods shall remain the property of WALDIS until payment is made in full. The customer hereby authorises WALDIS to enter the relevant retention of title in the retention of title register (Eigentumsvorbehaltsregister). If such entry in the retention of title register does not materialise, or if the purchased items are built-in to the customer's property, then the customer undertakes to re-assign ownership upon becoming in arrears with the payment of the purchase price. All costs in conjunction with said re-assignment shall be borne by the customer.

Applicable law and place of jurisdiction

The place of jurisdiction for all disputes arising from or in conjunction with the agreement shall be in accordance with the provisions of the Swiss Code of Civil Procedure.
